Recommendation

Recommended registration cap: **2,261**

Safe planning target: **1,900**

Estimated attendance: **1,974**

Difference from safe target: **74 above target**

WARNING: Expected attendance exceeds the safe planning target.

The recommendation is a planning estimate based on the selected show-up rate and safety buffer. It is not a guarantee of actual attendance or physical safety.

Attendance Scenario Comparison

Compare estimated attendance under low, expected, and high show-up rate scenarios.

Low scenario (79.0%)

1,857

Within safe planning target

Expected scenario (84.0%)

1,974

Above safe target, within capacity

High scenario (89.0%)

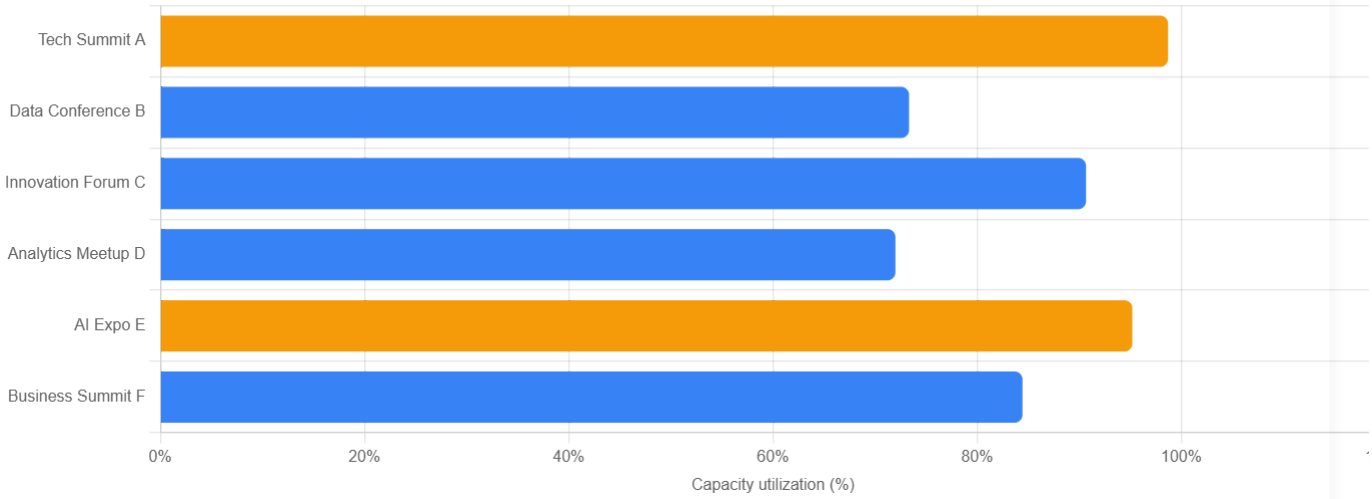

2,092

Exceeds venue capacity

Scenario rates are illustrative assumptions, not guaranteed forecasts. Attendance estimates are rounded to whole people.

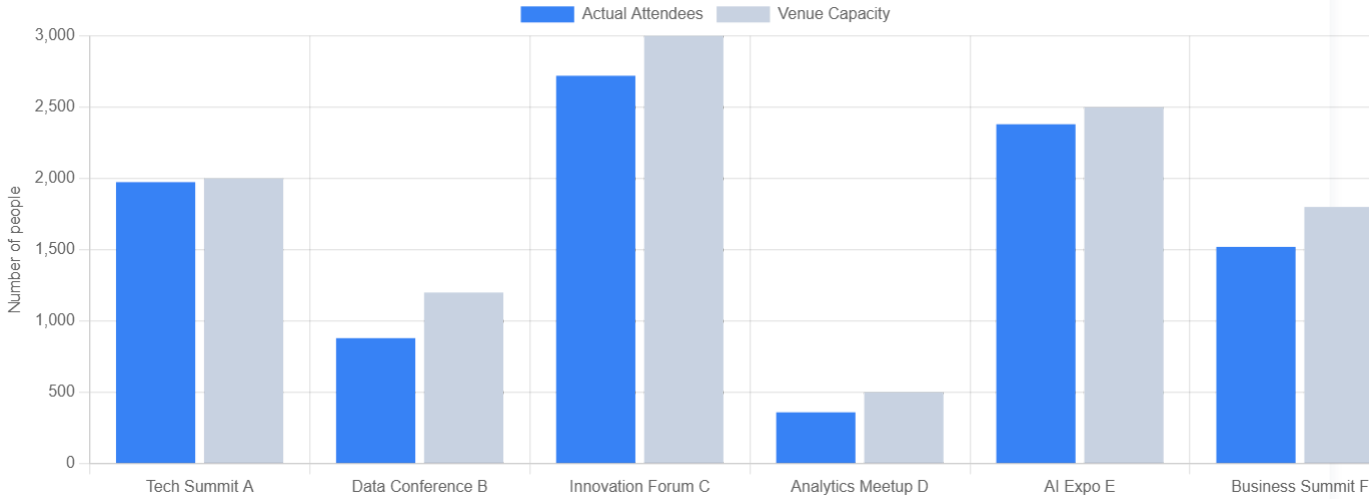

Capacity Utilization by Event

Compare actual attendance with venue capacity across all events. Hover over a bar to inspect utilization.

Capacity utilization = actual attendees ÷ venue capacity × 100. Values above 100% mean recorded attendance exceeded recorded venue capacity. Risk thresholds are illustrative.

Actual Attendance vs Venue Capacity

Actual attendance is compared with each venue's recorded capacity. These sample figures are synthetic.

Business Insights

- Highest capacity utilization: Tech Summit A (98.7%).

- 2 of 6 events have at least 95% capacity utilization.
- No sample events currently exceed their recorded venue capacity.
- Tech Summit A has 26 spaces remaining based on recorded attendance.
